Aircraft N308HG (gulfstream) had to abort take-off when they hit a goose. The aircraft returned to the ramp and was checked for damage. The pilot reported no damage. After removing the goose from the runway the sweeper was used to pick up the feathers. Operations conducted a runway sweep prior to the departure of the said aircraft.

Ms. Wanda Kennedy
Napa County Airport
2030 Airport Road
Napa, CA 94558

Dear Ms. Kennedy,

I am writing to you to express my sincere concerns to the bird problem at the Napa County Airport. As I am sure you are aware of, our plane hit two ducks on February 27, 2005. This happened at approximately 9:30 a.m. on runway 18 right, at Napa County Airport. The conditions were clear with recent rain. Two ducks came into our flight path of air, one impacting the left leading edge of the wing inboard. The other duck impacting the left engine inlet lip and cowling. Damage has yet to be determined.

In the past 15 years of operation in and out of Napa County Airport the bird activity has increased substantially. Our pilot has made numerous contacts to remedy the waterfowl and predator activity but the problem still seems to be on the rise.

We realize that this is an ongoing world wide problem and other airports are taking action to minimize the problem. Take off is by far the most dangerous time to have a bird enter into the engine and that is when our incident happened. I am very fearful that it may take a loss of human life for the airport to take serious action into this very serious problem.

I would like to request a review of the bird control programs that are currently and previously utilized at the Napa County Airport. If you would forward this to me at P.O. Box 35, Rutherford, CA 94573 it would be greatly appreciated.

Sincerely,

Charles J. Wagner
Owner
